Its nice a developer to listen to the community but however there are some flaws I think in this game. The control system is not good you have to be very ambidextrous to use the controls. Example you have to hold the bumper bar all the time whilst trying to use the digging function. would have been much nicer to toggle the digger on and off. Shame about the control issue as I bought it thinking my 3 year old would love it as he is digger mad. It is I guess a tablet game rather than PC for example the scenery looks like its in FOG and you cant see very far. In fact you can see it draw the scenery as you drive. If you do to digging the whole thing get laggy and slow and I would say that I dont have a slow PC for this sort of game. GTX 660 and an i3 but like I say the game really should not require this to run smoothly. I will be honest it steam did refunds then I would be asking for one.. Very good game I love it I bought the mobile version, And i wish they added Those vehicles, but overall Great game! I have one problem though If i collect too many dirt or stone particles my FPS Turns to absolute crap. Ok, lets get something straight. This is not going to knock your socks in terms of graphics. But they are more than adequate, in terms of what this game is. They are pleasant to look at and not trying to be some retro graphical mess either. Sound wise, it's ok. There were some repetitive sounds, like the tracks on vehicles. But not too distracting. The levels early on, are easy. But it become more taxing quite early on and are good challenges. Price matches the game well and as such, it's worth the price they are asking. Platform specific, I am using Linux (Manjaro) with a i7 and mobile GTX765m. Game runs fine, but with a huge amount of dirt pulled up in piles, there can be some lag. Assuming this is a physics issue, there has been an update so we will see. This doesnt mess with the gameplay, so no biggy. Overall an enjoyable game, I like the sandbox mode. I love the part when I tip my vehicle over and need another vehicle to use the arm and push it back. It's worth the price, the developer is active and listens to their customers.. the best game i have ever played in my entire life 9/10. this game is a rip off bad content. Insert Helpful review here. Something about adding vehicles and features to this game actually seems to reduce its charm. While I enjoyed The Little Crane that Could on the Raspberry Pi, I stopped playing this title after a very short time. While the original game was highly structured with clear objectives and fun puzzles, this one's more open map, malleable landscape, multiple vehicles, and less immediately examinable brainteasers just didn't seem to have the same draw. If you can find the original with just the yellow crane, I'd highly recommend that one, though.. WOW! i have to say this is a very cool game. I have been wanting for a game that allows you to dig a hole or plow a mountain or whatever you want. Very cool and very well put together, Also the Developer is awesome and very helpful.. fun little title, needs some more missions and trucks. For a really crappy port to PC, I would give it a 5/10. mostly because of the performance issues and somewhat bad controls.
